

## LF Tip: essential firefox extensions

by Guido Socher ([homepage](#))

### *About the author:*

Guido really likes it when a computer is tailored to his needs and looks like he wants it. That's why he is using Linux.

### *Abstract:*

This is a small tip. From now on LinuxFocus will have at least one new tip every month. If you have some ideas for a new tip then send them to [guido\("at" sign\)linuxfocus.org](mailto:guido(at)linuxfocus.org)

---

## Introduction

Mozilla Firefox is definitely ready for the "world wide web". Some websites offer useful content however some rather annoying and hostile advertisements. Here are two extensions that I use when I go surfing in the "world wild web".

### Flashblock

Flashblock removes all the flash plugins and replaces them by a little round button. No more flickering flash images! If you still want to see the flash animation then just click on the little button and it will start.

## NukeAnything

Nuke Anything can remove any html object. All you have to do is right click on the object, which may even be a text paragraph and select "remove object". Very useful to remove images and any type of advertisement. It can also be use to "clean up" a page before printing it.
